There is existing low linkage between most of Higher Learning Institution and their Alma Mater. This has triggered initiatives that address the current needs to strengthen partnership and development. University of Nairobi and other universities consistently release Alumni to job

market where are exposed to diverse lessons, new developments and innovations. These innovations and lessons learnt need to be disseminated to the present training process of future workforce and scientists.

As the UoN celebrates 50 years, the Faculty of Agriculture looks forward to bringing the alumni and the present students together on Knowledge sharing to strengthen the alumni networks. This will provide opportunities for alumni participation in training, curriculum review and strategic development initiative for the faculty.
